

Module : Computer Database			
No	User function	Scenario	Test Cases
1	Admin	Verify Page	User can see all elements on computer page according to UI design
2			User can see all elements on edit data page according to UI design
3			User can see all elements on add data page according to UI design
4		Filter (Positif Cases)	User can successfully filter computer name using valid input (alphabet, number and symbol)
5			User can successfully filter computer name using more than 1 character
6			User can see the correct number of data after data filtering
7			User can see the correct data when changing the pagination after data filtering
8		Filter (Negatif Cases)	User can see error message on textbox when click filter button using empty textbox
9		Sort (Positif Cases)	User can sort data ascending and descending by clicking column name (computer name, introduced, discontinued, company)
10			User can see the correct data when changing the pagination after data filtering and sorting
11		Sort (Negatif Cases)	User can't sort data by clicking out of column name
12		Edit Data (Positif Cases)	User can click data on the computer name column and will be redirected to edit data according to data chosen
13			User can successfully edit computer name using alphabet, number or symbol
14			User can successfully edit computer name using mix character (alphabet, number and symbol)
15			User can successfully edit introduced data using date format and number (yyyy-mm-dd)
16			User can successfully edit introduced data using a date before the discontinued date
17			User can successfully edit introduced data using empty data
18			User can successfully edit discontinued data using date format and number (yyyy-mm-dd)
19			User can successfully edit discontinued data using a date after the introduced date
20			User can successfully edit discontinued data using empty data
21			User can change company data by clicking and choose data from company dropdown
22			User can successfully edit company data without choose company on company dropdown
23			User will be redirected to computer page and will show a success message after clicking save button and when all data is valid
24			User can cancel edit data by clicking cancel button and will be redirected to computer page
25		Edit Data (Negatif Cases)	User can't edit computer name using empty data and will show error message
26			User can't edit introduced data using data other than date format and number, it will show error message
27			User can't edit introduced data using a date >= discontinued date, it will show error message
28			User can't edit discontinued data using data other than date format and number, it will show error message
29			User can't edit discontinued data using a date <= introduced date, it will show error message
30		Add Data (Positif Cases)	User can click add a new computer button and will be redirected to add data page
31			User can successfully add new data computer with computer name using alphabet, number or symbol
32			User can successfully add new data computer with computer name using mix character (alphabet, number and symbol)
33			User can successfully add new data computer with introduced data using date format and number (yyyy-mm-dd)
34			User can successfully add new data computer with introduced data using a date before the discontinued date
35			User can successfully add new data computer with introduced data using empty data
36			User can successfully add new data computer with discontinued data using date format and number (yyyy-mm-dd)

37		User can successfully add new data computer with discontinued data using a date after the introduced date
38		User can successfully add new data computer with discontinued data using empty data
39		User can choose company data by clicking and choose data from company dropdown
40		User can successfully add new data computer without choose any company on company dropdown
41		User will be redirected to computer page and will show a success message after clicking save button and when all data is valid
42		User can cancel add new data computer by clicking cancel button and will be redirected to computer page
43	Add Data (Negatif Cases)	User can't add new data computer with empty computer name and will show error message
44		User can't add new data computer with introduced data using data other than date format and number, it will show error message
45		User can't add new data computer with introduced data using a date >= discontinued date, it will show error message
46		User can't add new data computer with discontinued data using data other than date format and number, it will show error message
47		User can't add new data computer with discontinued data using a date <= introduced date, it will show error message

Module : JavaScript Alerts			
No	User function	Scenario	Test Cases
1	User	Click for JS Alert	User click JS Alert button and see alert box with OK button
2			User click OK button on alert box and will show result "You successfully clicked an alert"
4		Click for JS Confirm	User click JS Confirm button and see alert box with OK and Cancel button
5			User click OK button on alert box and will show result "You clicked: Ok"
6			User click Cancel button on alert box and will show result "You clicked: Cancel"
7		Click for JS Prompt	User click JS Prompt button and see alert box with Textbox, OK button and Cancel button
8			User click OK button with empty textbox on alert box and will show result "You entered: "
9			User click OK button with random character (123 !@# Testing) on alert textbox and will show result "You entered: 123 !@# Testing"
10			User click Cancel button on alert box and will show result "You entered: null"
